Subject: Kendall Sewer - Status Update / Press Release

Tony,

See below, feel free to edit:

The Town of Kendall continues to pursue additional grant funding for the REDI Wastewater Project. The REDI (Regional Economic Development Initiative) Wastewater Project is a vital undertaking aimed at providing the Town wastewater infrastructure to ensure a sustainable and resilient future. Recognizing the significance of this project, the Town of Kendall, in partnership with their subconsultant, LaBella Associates, has been diligently working towards securing additional funding to support the successful implementation of this critical initiative. These initiatives include seeking funding, grants, and low-interest loans from the Environmental Facilities Corporation (EFC), Northern Boarder Regional Commission, and New York State Parks.

LaBella Associates, has made substantial progress in project design, including completing survey work and undertaking crucial tasks such as wetland delineation and archaeological field work. LaBella's team is currently in the field delineating wetlands, a crucial step in ensuring environmental compliance and protection. Additionally, LaBella's subconsultants have initiated archaeological field work to assess any historical or cultural aspects that may be affected by the project.

The Town of Kendall and LaBella firmly believe in the importance of this project for the community's long-term sustainability and economic growth. By securing additional grant funding, they aim to accelerate progress, ensuring that the REDI Wastewater Project is executed with the utmost precision and meets the highest industry standards.

The collaboration between the Town of Kendall and LaBella Associates stands as a testament to their shared vision of creating a better future for the town's residents. They remain committed to transparency, stakeholder engagement, and environmental responsibility throughout the project's lifecycle.

Best Regards,

Jason R Ebbs, PE
